RESEARCH INTERESTS

Visual Understanding and Generation, Physically-Consistent Image/Video Synthesis, World Models, Computational Photography, Diffusion Models, Generative Modeling, Image/Video Enhancement.

EDUCATION

Purdue University

PhD Student in Electrical and Computer Engineering Advisor: Stanley H. Chan

West Lafayette, IN, US

08/2023 – 05/2027 (expected)

Shanghai Jiao Tong University

MS in Aeronautical and Astronautical Science and Technology

Shanghai, China

09/2020 – 06/2023

Shanghai Jiao Tong University

BEng in Aeronautics and Astronautics Engineering

Shanghai, China

09/2016 – 06/2020

Minor Degree in Administration Management

10/2018 – 06/2020

PROJECTS EXPERIENCE

Purdue University

Research Assistant (Advisor: Prof. Stanley H. Chan)

West Lafayette, IN

08/2023 – Present

- **SeeU: (4D Understanding and Video Generation):**

- * **Proposed** SeeU, a framework that learns continuous 4D dynamics from 2D frames to “see the unseen,” enabling temporally unseen and spatially unseen generation as well as video editing.
- * **Pioneered** a $2D \rightarrow 4D \rightarrow 2D$ learning pipeline that lifts 2D inputs, models 4D dynamics, and projects back to produce coherent 2D results—introducing a new information flow and training scheme.

- **NewtonGen (Physics-Consistent Text-to-Video Generation):**

- * **Developed** a physics-consistent and controllable text-to-video framework that explicitly incorporates learnable dynamics.
- * **Innovated** Neural Newtonian Dynamics, which models different dynamics via unified neural ODEs.

- **Generative Photography (Scene-Consistent Camera-Controlled Text-to-Image Generation):**

- * **Introduced** a new text-to-image generation paradigm for photography with an understanding of camera physics.
- * **Produced** significantly more scene-consistent photorealistic images than SOTA models (Stable Diffusion 3, FLUX).

- **High Dynamic Range (HDR) Imaging:**

- * **Proposed** a novel high dynamic range (HDR) imaging framework capable of handling a flexible number of causal inputs.
- * **Utilized** side information and attention mechanisms to effectively suppress artifacts during the fusion process.

PATENT

A trajectory solving and alignment method based on inertial measurement unit and ultra-short baseline positioning sensors for autonomous underwater robots. China Patent. CN 114993313 B.

AWARDS & COMPETITIONS

Ivy League Scholarship for Exceptional Students (Innovation)	Top 1%
Outstanding Graduate of Shanghai Jiao Tong University	Top 15%
Shanghai International Creators Competition: Special Competition of Drones	First Prize
DELL AI for Social Innovation Competition: AI/ADAS of Intelligent Car	National Second Prize

OTHER ACTIVITIES

Teaching Assistant , Automatic Control Theory, Shanghai Jiao Tong University	2021
Workshop Co-organizer , WACV GAIP 2026	
Reviewer , CVPR, CVPRW, ICCV, WACV, ICIP, ICASSP	
IEEE Graduate Student Member	

SKILLS

Languages: English (Fluent), Chinese (Native)

Programming: Python, PyTorch, HTML, JavaScript, Matlab, C/C++ (Basic)

Technologies: Diffusers, Transformers, Post-training, 3DGS, CUDA, OpenCV, NumPy, Git, LaTeX, Linux, Slurm, Markdown, Gradio, NVIDIA Jetson, Adobe Photoshop, Adobe Premiere

Others: Photography, Fishing, Drones, Rowing
